MH EPT 90

Electric driven hydraulic test bench

The test bench is controlled by a Siemens PLC (s7-1200 range). For the user interface we're using a Siemens 15 inch comfort touch HMI screen. From this screen all sensors and processes can be monitored and controlled. At the end of a test cycle it's possible to store the test data onto a USB drive directly from this panel. You measure digitally:

- Pressures
- Flows
- Temperature
- RPM
- KW
- Oil level
- Contamination

Online option: Send test data directly to your customer.

For lease options, call your nearest MH office.

For more repair solutions, please visit our website www.mhhydraulics.com

KW	90 Kw – 400V , 150 Amp
RPM	0 – 2900
DIRECTION	Clockwise / Counter clockwise
PRESSURE	350 bar
OIL	approx. 800 ltr
SUITABLE FOR	Hydraulic pumps for open systems Hydraulic pumps for closed systems Hydraulic pumps with zero position
